PROFESSIONAL SUMMARY

Detail-oriented **Computer Science graduate** (coursework completed) specializing in **Software Engineering, Artificial Intelligence (AI), and Software Automation**. Demonstrates foundational software development and infrastructure experience from a 3-month industrial attachment at the Parliament of Kenya ICT Department. Experienced in building full-stack web platforms and engineering autonomous AI agents capable of translating natural language into database queries. Skilled in end-to-end software deployment, workflow automation scripting, and database optimization.

TECHNICAL SKILLS

- **Software Engineering:** Object-Oriented Programming (OOP), RESTful APIs, Git/GitHub, Agile Frameworks, Architecture Design
- **Software Automation:** Automated Scripts (Python/Bash), Workflow Automation, Deployment Pipelines, Automated Database Querying
- **Artificial Intelligence:** AI Agents, Natural Language Processing (NLP), Predictive Analytics, Machine Learning (Scikit-Learn)
- **Programming Languages:** Python, Java, JavaScript, C++, SQL
- **Web & Database Technologies:** HTML5, CSS3, React, Node.js, MySQL, PostgreSQL
- **IT Infrastructure & DevOps:** Cloud Deployment, Systems Troubleshooting, Hardware Diagnosis, Local Area Networks (LAN)

WORK EXPERIENCE

ICT Intern (Industrial Attachment)

Parliament of Kenya, ICT Department (*Nairobi, Kenya*) | **May 2025 – August 2025**

- Supported the IT team in managing, deploying, and maintaining enterprise software systems across legislative departments.
- Identified opportunities for software automation by utilizing basic scripting to streamline routine diagnostic checks and administrative tasks.
- Provided hardware and software support to staff, troubleshooting operating systems and specialized administrative applications.

- Participated in the secure setup, network configuration, and deployment of newly acquired ICT software and hardware endpoints.

PROJECTS

Natural Language AI Agent for Institutional Databases | *Final Year Capstone Project*

- Engineered an intelligent AI agent utilizing Natural Language Processing (NLP) to allow non-technical users to query institutional databases using plain English.
- Integrated predictive analytics capabilities to identify data trends and automate the generation of forecast reports from underlying SQL data structures.
- Implemented backend software automation scripts to dynamically translate, sanitize, and execute raw natural language into optimized SQL queries.

E-Commerce Platform for Furniture Enterprise | *Independent Developer*

- Designed and developed a modern, responsive full-stack e-commerce web application with features including product catalogs, shopping carts, and checkout modules.
- Implemented secure database schemas to manage dynamic product inventories, user authentication, and transaction workflows.
- Automated the cloud deployment pipeline to host the platform live, ensuring high accessibility, optimal performance, and secure data handling.

EDUCATION

Bachelor of Science in Computer Science

Karatina University | *Graduation Date: October 2026*

- **Specialization:** Software Engineering and Artificial Intelligence.
- **Status:** Coursework completed; waiting for graduation.

Kenya Certificate of Secondary Education (KCSE)

Leseru Boys High School | *Graduated*

REFEREES

Dr. Njoroge

Computer Science Lecturer

Karatina University
